

# Delta Marine unveils innovative, reliable & qualified solutions

A prolific and reputable designer providing high quality engineering services with innovative approach and state-of-the-art technological tools for building of merchant/naval ships, yachts and offshore structures.

Delta Marine has been founded in 1996 by a group of naval architects, as a ship design and consultancy firm with the intention to meet ship owners' and shipyards' demands for engineering solutions in maritime and shipbuilding activities. The company, as a fully independent organization, provides design, engineering and consultancy services for building of merchant/naval ships, yachts and offshore structures.

From very beginning of its establishment, Delta Marine has started to present integrated engineering solutions containing concept design, basic design, production engineering, post-production engineering, advanced engineering, project management, supervision and consultancy services. After a short period of time the company has been accepted as the most reputable and prolific Turkish design house and later on as a favorite solution partner at international level thanks to its continuous improvement

philosophy standing on close interest for developments in professional and computer technologies.

Having created more than 160 merchant ship designs since its establishment, Delta Marine has always got involved in various important projects such as a polar-class, dual-fueled asphalt tanker of 15.100 DWT designed to operate at -30°C temperature while carrying cargo at 180°C. Another significant contract was signed for the design of a 11.500 TLC Floating Dry Dock under construction for USA based yard. 850 Pax Passenger Ship has been one of the most interesting designs created by the design house whose recent focus is on the stainless-steel tankers of 7-7.500 DWT for Turkish and U.K. Owners and a 90 m Ro-Pax for another U.K. Owner. Numerous merchant ship designs have been awarded as Ship of the Year or selected among the elite designs as Significant Ships by national and international institutions.

Subsequent to the experience having gained first in E-Class Training Boats and then in precious MİLGEM Program (Turkish Navy's Ada Class Corvette), Delta Marine has taken part in various important naval shipbuilding projects. Delta Marine has been awarded as the designer for the biggest naval

Having created more than 160 merchant ship designs since its establishment, Delta Marine has always got involved in various important projects such as a polar-class, dual-fueled asphalt tanker of 15.100 DWT designed to operate at -30°C temperature while carrying cargo at 180°C.

technology transfer project (in single unit) ever made by Turkey, a 158-m long Navy Fleet Tanker (PNFT) under construction for Pakistani Navy in Karachi. Following PNFT, another important footprint was left by the 8500 TLC Floating Dry Dock which have been designed and built as two units for Saudi Arabian Navy, to serve in the Navy Base located in Jeddah. The latest achievement of the company was the contract made for detail design of TCG Anadolu (Multipurpose Amphibious Assault Ship), which will be the Turkish Navy's new flagship.

Over the last 20 years Delta Marine has also acted as an academia for many naval architects, marine engineers and technicians. The company's per-

spective has favored forming a multi-disciplinary team bringing added value into each phase of the ship design process. Such a strong, focused and efficient team is established by blending the experience with dynamism to embrace different perspectives on the way to reach professional perfection. Following the client-focused design development approach and benefiting from the organizational memory have been the key elements for successful projects presenting economical, safe, comfortable, aesthetic and environment-friendly products to merchant and naval maritime. Today Delta Marine is proud to present a big fleet sailing in different parts of the World's seas.
